EXPERIENCE

Gydai, London — Full Stack Software Developer

July, 2019 - PRESENT

- Developed and redesigned paystub component for application with Knockout.js which allows employees to view payroll files and also allows employer to upload payment files to application
- Improved several features and rewrite their codebase logic, which resulted in better performance and readability using VB.Net, XML and Microsoft Server SQL
- Maintaining and improving features of two projects, one is using C#.net and the other is using VB.net.

Akira Systems(Scyt1), London -Full Stack Software Developer

October 2018 - April 2019

- Developed new component for application which allows users to view their pay stubs and T4 files with Knockout.js
- Fixed over 120 technical issues in 3 months using Bootstrap.js, Knockout.js, C# ASP.Net MVC and Microsoft Server SQL technologies
- Implemented and improved 3 features due to client requirement for information security concern, including kick-out logged-in unauthorized users, hiding file name in browser URL, and lockdown account for several failed login attempt

PROJECTS

Image Repository

https://github.com/Chun-Yang258/Shopify_Challenge_Project

Developed a mini e-commerce application built with React and Firebase cloud services. It provides Authentication, Search, CRUD, Shopping Cart features. It can be viewed on live demo at <https://image-repository-db.firebaseio.com>

EDUCATION
